DHRUV PARMAR

FRONT-END ENGINEER | FULL-STACK ENGINEER

To build scalable digital products at the intersection of **Front-end Engineering, Full-Stack Development & LLM Integration**, with a focus on performance, usability and production-grade architecture.

CORE COMPETENCIES

- Front-end Architecture
- Full-Stack Development
- React & Next.js Development
- REST API Development
- LLM API Integration
- AI-Assisted Development
- Performance Optimization
- Authentication & Authorization
- Responsive Web Application Development
- Cross-Functional Product Delivery
- Open-Source Development

TECHNICAL SKILLS

- **Front-end Engineering:** React.js | Next.js | TypeScript | JavaScript | Redux | RTK | React Native | Tailwind CSS | HTML | CSS | Storybook
- **Back-end & APIs**: Node.js | Express.js | REST APIs | GraphQL | Microservices | SQL | NoSQL | MongoDB | Elasticsearch
- **AI & LLM:** LLM API Integration | OpenAI APIs | Anthropic APIs | AI-Assisted Development | Claude | GitHub Copilot | Cursor
- **Cloud & DevOps**: AWS | Docker | CI/CD | Git | GitHub
- **Testing & Engineering:** Jest | Testing Library | Data Structures & Algorithms | System Design
- **Design & Development:** Figma | Responsive UI Development | Browser Extension Development
- **Programming:** Python

EDUCATION

Shri Vaishnav Institute of Information Technology
B.Tech. — Computer Science / Information Technology [IBM-AI] | 2024
CGPA: 8.4

PROFILE SUMMARY

- Full-Stack Engineer with **over 2 years of experience** spanning Front-end Architecture, React/Next.js Development, REST API Development, LLM Integration, Mobile Application Development and Production-Grade SaaS Engineering.
- Most recently contributing as Front-end Engineer at Deuex Solutions, architecting enterprise product interfaces, Browser Extensions, AI-powered features, authentication flows and real-time data experiences for the Collate SaaS platform.
- Built a Browser Extension **benefiting 1,000+ enterprise users at Deuex Solutions, surfacing real-time insights across 10+ websites through production-back-end integration** and contextual UI experiences.
- Combining AI Integration with architectural ownership and performance engineering, with experience prototyping four LLM-powered features, reducing development time by **25%,** and driving measurable front-end performance gains through React-to-Next.js migration and component-level optimization.
- Bringing cross-functional product execution to engineering teams, coordinating with back-end engineers and designers, translating requirements into client-facing experiences, and using structured performance profiling to solve complex front-end bottlenecks.

WORK EXPERIENCE

DEUEX SOLUTIONS | Remote | Front-end Engineer | Jan 2025 – May 2026

- Architected a Browser Extension for the Collate SaaS Platform, integrating content scripts with the production back-end to surface real-time insights across **10+ supported websites and reduce enterprise user context-switching.**
- Integrated OpenAI and Anthropic LLM APIs to prototype 4 AI-powered features within the Collate platform, translating generative AI capabilities into functional product experiences.
- Leveraged Claude, GitHub Copilot, and Cursor across daily engineering work-flows, accelerating feature development through AI-assisted implementation and iteration.
- Built 12thMen, a React Native mobile application for real-time cricket scoring, translating live-score requirements into responsive mobile interfaces.

HIGHLIGHTS

- Engineered contextual UI components, including right-click menus and in-page popups, enabling real-time data visualization within active user work-flows for 1,000+ enterprise clients.
- Redesigned Authentication & Authorization flows across 2 tiers, implementing Role-Based Access Control to secure client-side access for 5,000+ users.

RETVENS TECHNOLOGIES | Indore, India | Junior Front-end Developer | Feb 2024 – Jan 2025

- Owned end-to-end Front-end Architecture for 4 enterprise-grade production products serving hospitality businesses across 10 regions, supporting latency-sensitive systems with 30+ concurrent users.
- Aligned front-end implementation with hospitality-specific work-flows, translating client requirements into scalable interface experiences across multi-region products.
- Participated in Agile/Scrum delivery cycles with engineering and design stakeholders, resolving dependencies and aligning feature implementation with release requirements.

HIGHLIGHTS

- Coordinated delivery of **10+ client-facing** features with Back-end Engineers and Designers, translating product requirements into deployable front-end experiences and increasing feature **adoption by 25%.**
- Migrated applications from React to Next.js using SSR/SSG, reducing page load time by 40% from 5 seconds to 3 seconds while strengthening cross-browser reliability.

PROJECTS

OPENMETADATA | Open Source | Feb 2025 | Link

- **Contributed 100+ commits to an open-source enterprise** data-catalog platform used across 50+ organizations, supporting collaborative development and feature enhancement.
- Diagnosed rendering bottlenecks **across 8 front-end components**, reducing page load time by **30% through targeted performance optimization**.
- Collaborated within **Agile/Scrum pods of 5–8 engineers**, contributing front-end changes alongside cross-functional engineering workflows.

HUSTLE WITH KAI | Jan 2025 | Link

- Delivered a production e-commerce MVP as sole engineer in 3 months, achieving a 92 Lighthouse performance score and 2.1-second page load time.
- Increased organic search traffic by 150% within 6 months through SEO optimization and discoverability enhancements.
- Engineered the platform end-to-end, spanning requirements gathering, development, performance optimization, SEO implementation, and production launch.
